## State of Oklahoma District Report Description of the Longitudinal Database

The data presented in this report are the result of extensive processing of employment, certification, enrollment and assignment files from the State of Oklahoma Board of Regents and Department of Education into a longitudinal database of workforce dynamics. As such, there are several decisions that must be made about the data that may result in information that is not directly comparable to the cross-section, annual data files provided to Data and Decision Analysis, Inc.

The longitudinal database is created by individual person, not by position. This means that each educator is identified by a single district and a single position. First, an educator's primary position is identified according to where they devote the majority of their time. The educator's home district is then determined based upon the district in which they spend the most time *in their primary position*. Since educators that split their time between districts will not appear in both districts, the district workforce counts may be less than expected. For a more complete explanation of the procedure used, please refer to Appendix A of this report. Appendix B details the processing procedure used for the higher education data. A list of positions as defined in this report is provided in Appendix C.

In addition, every attempt has been made to resolve differences in key demographic data over time. The longitudinal database has been created to identify educators by a single race, sex and year of birth. This has been done by assigning the highest frequency found for each demographic characteristic. Again, while this produces consistency longitudinally, it may yield slightly different data than the cross sectional (annual) data.

# State of Oklahoma District Report

## Description of the Report

### Overview of the pdf File

The Oklahoma District Report is presented as an Adobe Acrobat pdf file with bookmarks down the left side of the screen. If the bookmarks do not appear on your screen, press the F5 function key, or click on Window -> Show Bookmarks from the menu at the top of the Reader window. The bookmarks have two sets of district listings. The first is sorted alphabetically by district name. The second list is sorted by Oklahoma district code. Click on the '+' to the left of the district groups to expand the list. Clicking on the '-' will collapse the listing.

The Oklahoma District Report consists of five pages for each district containing descriptive indicators, workforce counts, enrollments, percentage distributions, data quality measures and State comparative data. Graphs are used to highlight key data relationships. The following describes each data item used in the report:

### The First Page of the Report

#### Supply and Demand Graphs

The first two graphs plot the change in total educators with the change in total enrollments for the district and comparatively for the State. These data series are often used as supply and demand indicators and allow a quick look at how the two are moving relative to one another. As is illustrated in the State graph in the upper right, enrollments have dipped slightly negative in the last two years. Changes in hiring are reflected by the increases and decreases seen in the educator numbers. Any divergence in these two series indicates a potential imbalance if not corrected. Ideally the two series would move in the same direction and magnitude over time.

#### Descriptive Indicators

For each set of district indicators, there are State indicators for comparison purposes:

*Student to Educator Ratio* is the total number of educators divided by the total district enrollment.

*Student to Teacher Ratio* is the total number of teachers divided by the total enrollments.

*Change in Educators* and *Enrollments* are the headcount increases or decreases from the previous year.

*% Change in Educators* and *Enrollments* are changes in headcounts relative to last years total headcount.

#### Workforce

*% Part-Time* are the educators in the district who's FTE is less than 1.0 divided by the total educators.

*% Administrative Staff* and the *% Professional Staff* show that part of the workforce engaged in non-classroom position relative to total educators.

*% Minority*, *% Minority in Administration* and the *% Female in Administration* are calculated from the headcounts on the third page of each district report.

#### The Teachers Descriptive Indicators

*Average Age* is the average age of teacher where the age is known.

*Average Experience* is the average teaching experience as reported in the annual census of teachers.

*Average Salary* is the average salary for full-time teachers (where FTE=1.0).

*% Minority Teachers*, *% Female Teachers* and *% Special Education Teachers* are calculated from the counts on the second and third pages of each district.

#### Enrollments

The final part of the Descriptive Indicators section contains enrollment data calculated from the Oklahoma Department of Education Enrollment files.

*% Minority* is the number of non-white students enrolled as a percentage of the total enrollment

### **Attrition Indicators**

Attrition counts and rates are reported for all educators according to experience groups.

The three groups include new educators with less than 7 years of experience, educators with 7 or more years of experience but not of retirement eligibility, and those educators who are eligible for retirement as defined by Oklahoma. Oklahoma considers an educator eligible for retirement if the sum of an educator's age and experience is greater than 80.

Educator *Attrition* includes the total workforce in each group, the counts of those exiting a district from the current year to the next year, and their rate of attrition.

The report also shows a count of educators expected to reach retirement eligibility within the next 5 years.

## **The Second Page of the Report**

### **Profile by Position**

The profile by position section of the report includes head counts and percentages for Administrators, Professional Staff and the detailed components of Teachers. Please remember that educators are assigned to a single position based upon their primary position. Refer to *the Description of the Longitudinal Database* at the beginning of this report as well as the Appendices for more information about the process used to assign educators.

### **Total Enrollments**

*Total Enrollments* and percentages are provided by grade grouping for the district.

### **Indicator Graphs**

*Student Teacher Ratio* includes data from the first page of the report showing the district and State ratios.

*Enrollment by Grade Group* shows an area chart of enrollments for grade groups 1 through grade 12.

## **The Third Page of the Report**

### **Dynamics of the Workforce**

The Dynamics of the Workforce data examines the pieces of the pipeline for human resources flow into, out of, and between school districts.

*Total Workforce* includes all educators employed in the district as defined earlier in this report.

*Retained Educators* are individuals who were employed in the same district in the year before and remain in the current year.

*Newly Hired* educators are those individuals hired to replace exiting educators or fill new positions. The Newly Hired educators are composed of three groups:

- *Transfers In* are educators who were employed in a different Oklahoma district in the previous year and are employed in the district being reported in the current year.
- *Reentrants* are educators who were not employed in the previous year in any Oklahoma district, and are employed in the district being reported in the current year with experience greater than one (1).
- *First Time Educators* are individuals who appear for the first time in the district being reported with no prior experience (experience=0).

*Total Exiting Next Year* include educators who leave public education in Oklahoma for at least one year, or who transfer to other districts.

- *Transfers Out* are educators who leave the district being reported in the next year, but who appear in another Oklahoma public school district.
- Those who *Leave Oklahoma Education* are educators who do not appear in any Oklahoma public school district in the following year.

### **Dynamics Rates**

*District Attrition* is calculated by dividing the *Total Exiting Next Year* by the *Total Workforce* in the current year. This is the actual attrition rate experienced by the district. However, as shown in the section above, part of this attrition is explained by educators moving to other districts. Therefore, when State data on attrition rates are presented, they are actually calculated by dividing those *Leaving Oklahoma Education* by the *Total Workforce*. The ratio of *Transfers In/Out* quantifies the district-to-district movement in term of the district being reported. If the number of *Transfers In* is equal to the number of *Transfers Out* then the ratio is equal to one (1). A number greater than one indicates that the district is a net importer of experienced educators while a number less than one indicates a net exporter of experienced educators. A possible measure of attractiveness is indicated if the district is a net importer of experienced educators over time. A ratio that is consistently less than one over time indicates that the district is a net supplier of experienced educators to other Oklahoma school districts.

*State Attrition Distribution and District Rate* graphs shows the frequency distribution of all the district's attrition rates (the dashed line). The solid line is the district attrition rate for the current district. As the graph shows, most districts are clustered around the average district attrition rate of 8.0%.

*District Transfers In/Transfers Out* shows the ratio from the previous page. Again, a solid line consistently over one (the dashed line) indicates that the district is a net importer of experienced educators.

### **Educators by Higher Education Institute**

Up to 1995-96 the Department of Education personnel files reported the College attended by current staff members. This information is presented here for the last time as it is no longer collected.

## **The Fourth Page of the Report**

### **Profile by Known Race and Gender**

This section reports headcounts of Administrators, Professional Staff, and Teachers for White, Black and Other race by gender. Other race includes Hispanic, Asian/Pacific Islander and American Indian/Native Alaskan. Other race contains only known races and does not include unknown or missing races or the Oklahoma code for "Other". Totals in this section of the report may not add to the total head count if the race or gender of an educator is unknown.

### **Teacher Age and Experience Distribution**

The headcount of teachers by age or experience grouping. Changes in the age and experience distributions over time can be used as an indicator for such things as populations nearing retirement or those that are attracting younger teachers. A graphic depiction of the change in distributions from 1992 to 1996 is shown at the bottom of the fifth page.

## **The Fifth Page of the Report**

### **Attrition**

Attrition and retention rates are reported for educators as a whole and for teachers.

*Educator Attrition* rates are the total number of educators exiting a district from the current year to the next year.

*Attrition from Transfers* are that portion of attrition that can be accounted for by a change of district.

*Attrition from Exits* are the educators that have left education in Oklahoma in the next year.

*District Retention* rates are the total number of educators or teachers retained within the district from the current year to the next year.

### **5 Year Average Retention/Attrition**

Retention rates by year of experience through the first 5 years of teaching yield valuable information about the attrition of new teachers. Since attrition is highest for teachers during these first few years (other than the cohort retiring) State retention rates for each of the first 5 years of experience is such an important measure, it is important to provide whatever details are possible at the district level. However, due to the small numbers of teachers in each of these experience groups at the district level in any given year, it is necessary to pool the data over 5 years to produce an average retention rate.

The “retained” rates count the number of teachers for each experience group that are retained in the same district. The “transfer” rates show those teachers that stay within the Oklahoma system, but move districts. In either case the denominator is the total number of teachers found within that experience group. The attrition rate for the district shows the percentage of teachers that leave the district (either by transferring or leaving teaching). The statewide attrition rate indicates the percentage of teachers who either leave the state or leave teaching. The statewide attrition rate does not include those that transfer within districts since those teachers are still retained within the state system.

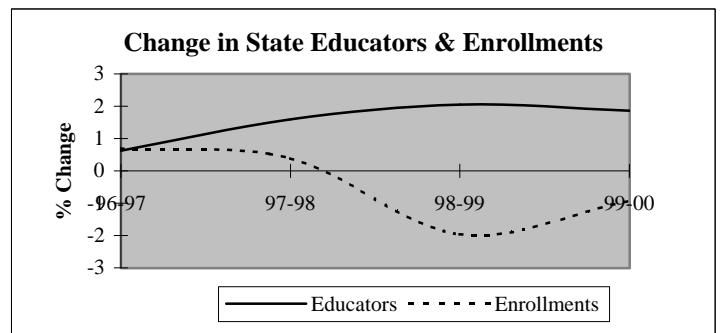

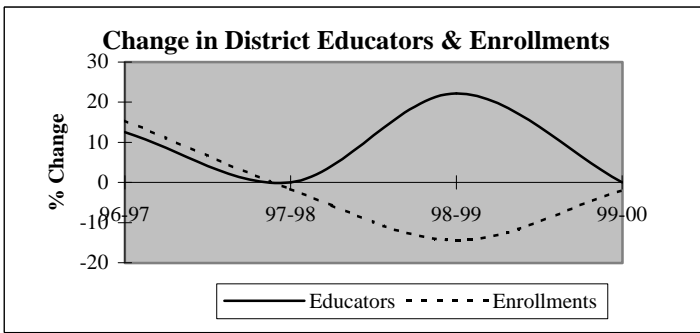

### **Survey Data Quality**

The *Experience Increment* shows the percentage of teachers that increase their experience by 0, 1 and 2 years respectively from one year to the next. It is expected that a full-time year will increment by one from year-to-year. Part-time teachers can increment by 1 or 0 depending upon their work experience. Increments outside of this range usually indicate a potential error in reporting.

### **Age and Experience Distribution Graphs**

The graphs on the bottom of the fifth page contain data from the distributions reported on the fourth page of each district.
